

Active Track

Two Way Voice Communications, GPS Tracker, Lone Worker and "Proof of Presence" in a single device.

ACTIVE TRACK is a handheld, easy to use personal security device designed for two-way voice communications, GPS tracking, lone worker protection and proof of presence reporting, with all events and alarms monitored in real-time via a cloud-based web portal called ACTIVE VIEW.

In addition to ACTIVE VIEW's web-based reporting, ACTIVE TRACK can send SMS text messages regarding GPS positions, Panic or Man down alarms to a designated mobile telephone, eg in a control room.

ACTIVE TRACK incorporates an RFID reader which can be used to read RFID checkpoints. These can be named and placed around a customer site to help identify locations that require regular checks. By activating the Read Checkpoint button, the checkpoint will be read immediately and its assigned name will appear in the ACTIVE VIEW event log in real time.

E-mail alerts can also be sent to a manager or supervisor informing them that a member of staff has not arrived on site or if the patrol has not been started or completed.

All of these advanced features are provided in a handheld purpose-built case that is extremely rugged and is both shockproof and waterproof. The battery cover tamper and impact detection facility also help limit vandalism and improve operational performance.

Integrated GSM/GPRS Modem. Supports Two Way Voice and GPRS based real time communications

Lone Worker Protection with Man Down, Panic Alarm and Personal GPS tracker.

Roaming SIM card for improved network coverage

Durable construction, waterproof, shockproof and IP67 rated.

Tamper and impact detection system for improved operational performance.

Rechargeable Lithium Polymer battery. One five hour charge permits twenty four hours use.
